DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statements filed 1/2/2003 and 3/10/2003 have been considered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
4. Claims 51-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kisu in

view of Kaname et al. Kisu teaches a charging roller facing a surface of a body to be charged and applied with a voltage, said charging roller comprising: a metallic core; an elastic member covering said core; the elastic member provided on said core, including said opposite end portions, such that said elastic member has a same outside diameter throughout an entire length in an axial direction; and films respectively wrapped around portions of said elastic member corresponding to said opposite end portions of said core. Kisu does not teach that the charging roller comprising: a metallic core including axially opposite end portions larger in diameter than the other portion.

Kaname et al. teaches a charging roller comprising a metallic core including axially opposite end portions larger in diameter than the other portion (Figures)

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings of Kaname et al. with the charging device of Kisu to provide a charging device which eliminates charging irregularities of a charging member resulting from nip-width difference (Kaname et al.; abstract).

Allowable Subject Matter

5. Claims 1-50 are allowed.

Response to arguments

6. Applicant arguments with respect to claims 51-52 are moot in view of the new grounds of rejection.

Conclusion
